Bootstrap Quick Start

By Jacob Lett

Bootstrap Creative

The screenshot shows a Bootstrap-based dashboard. At the top, there's a header with a logo and navigation links. Below the header is a large chart area with a line graph titled "Traffic" showing data from May 1st to May 10th. The chart has two series: a red line and a blue line. Below the chart is a section titled "Recent Activity" with a list of items:

- 1. All New Requests (100 activity items)
- 2. How to use Google Analytics (100 activity items)
- 3. How to use Google Tag Manager (100 activity items)
- 4. Using responsive design (100 activity items)
- 5. About us

Step 1

In order to override the default Bootstrap styles, we have to reference our own CSS and JS files after the Bootstrap files. The browser loads the page from the top down, so our styles will change when the browser reaches the file by Bootstrap because they are loaded after it.

First, copy some bootstrap stylesheets and scripts in the `<head>` comment section right before the closing `</head>` tag. We are adding the Latin Language first and then the English afterwards.

[Copy this code](https://bootstrappingcreative.com/bootstrap/)
<https://bootstrappingcreative.com/bootstrap/>

```
<!-- Latin Bootstrap files from Google Fonts -->
<link href="https://fonts.googleapis.com/css?family=Lato:400,400i,700,700i" rel="stylesheet">
<!-- Bootstrap files from Google -->
<link href="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0-beta.2/css/bootstrap.min.css" rel="stylesheet">
```

Step 2

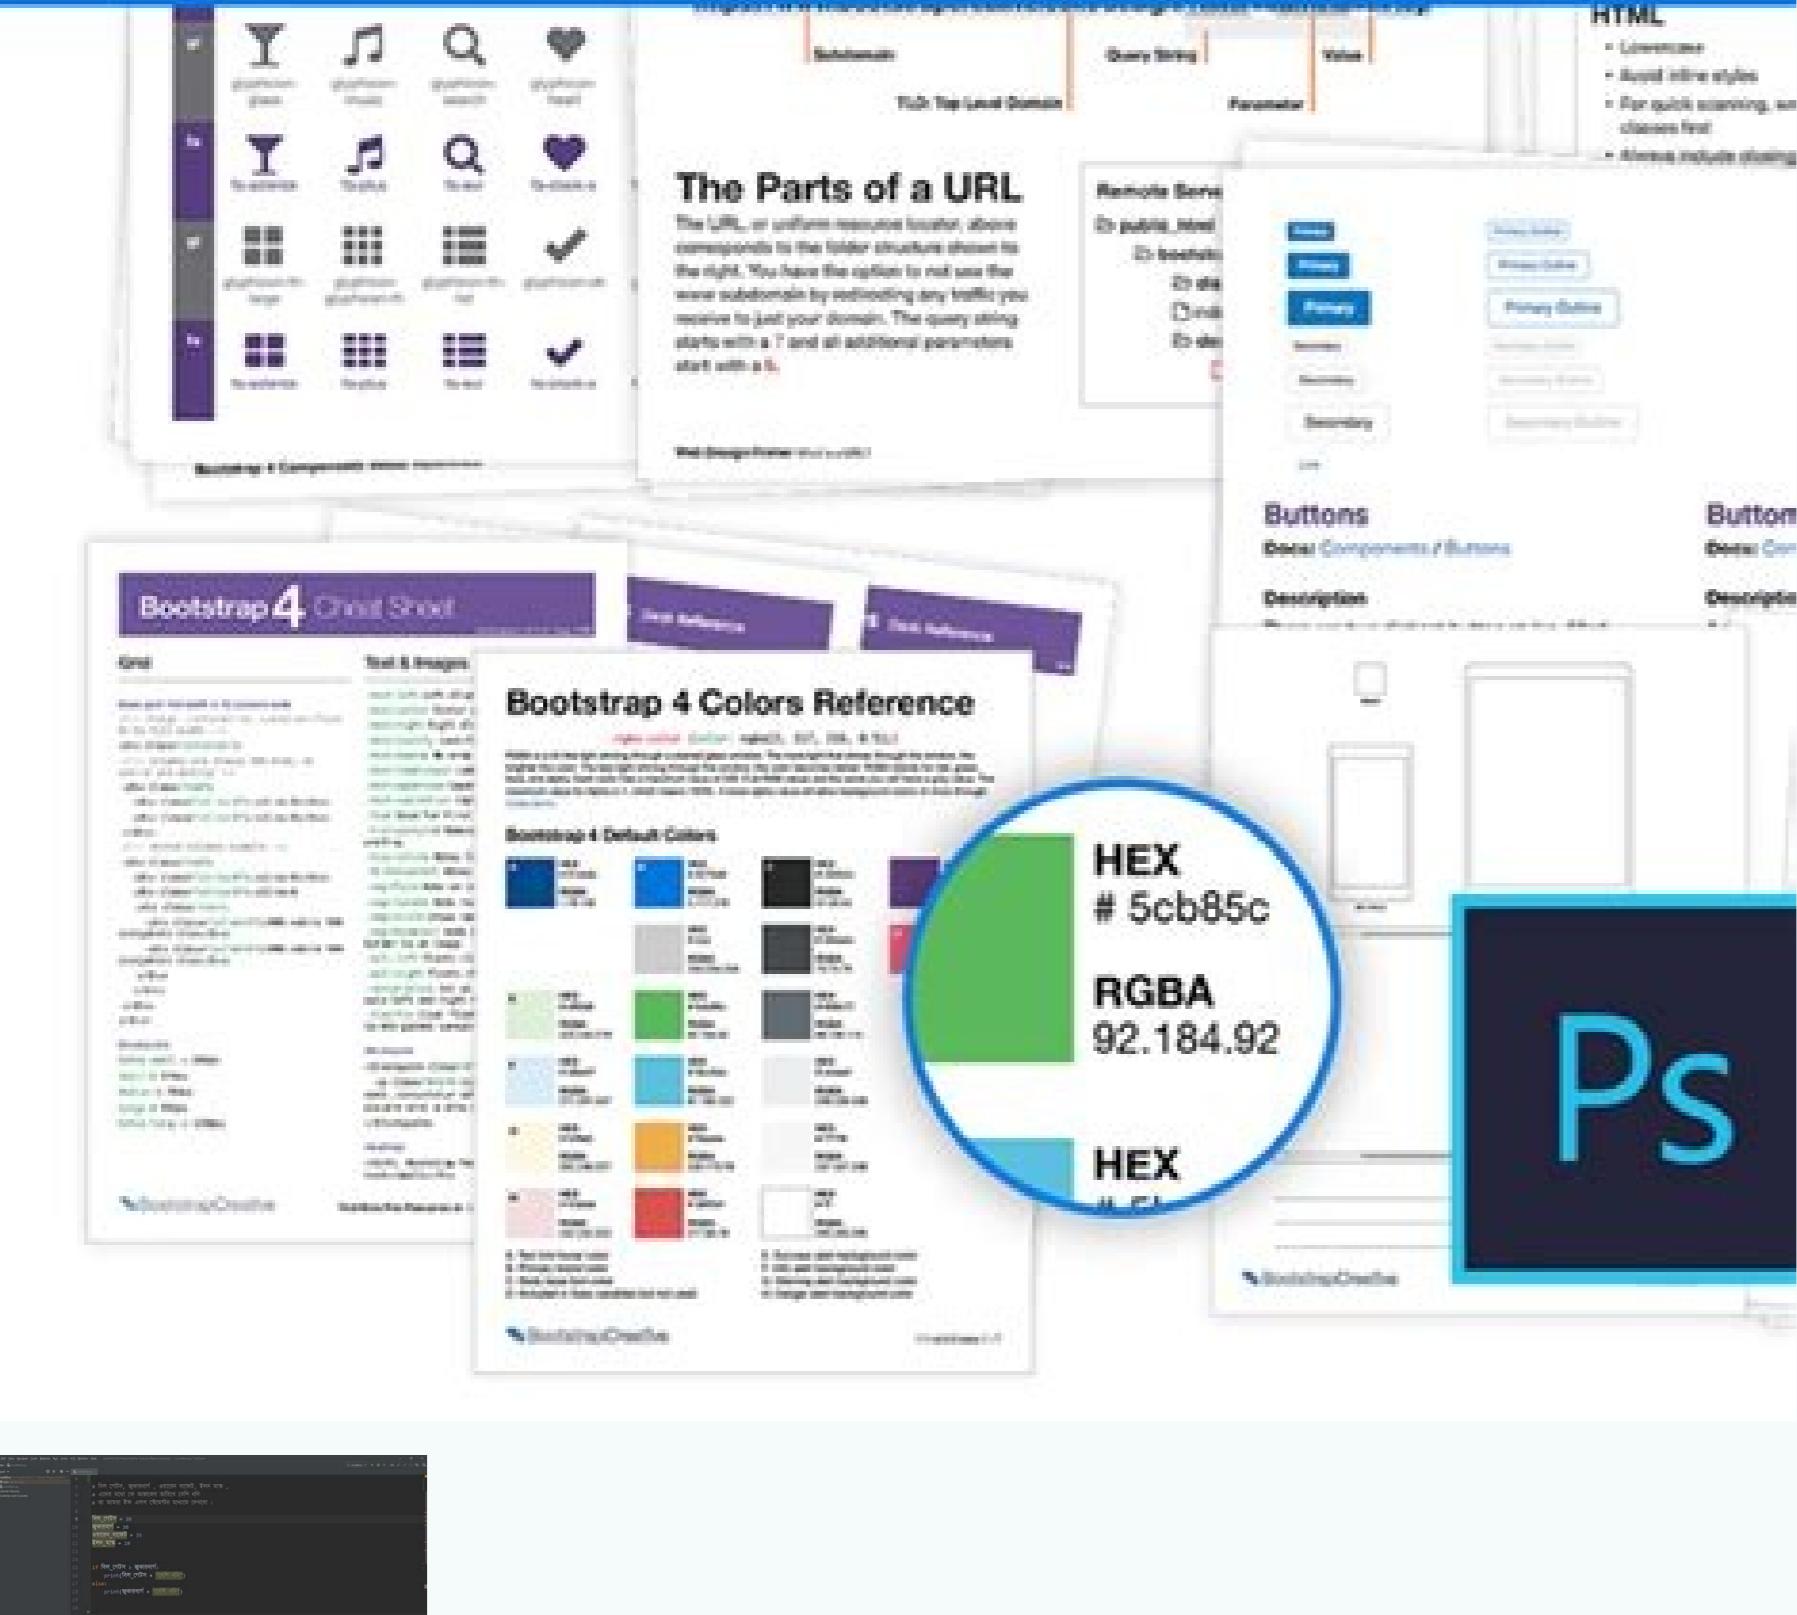

Now, copy some javascript scripts and place them in the `</body>` comment section right before the closing `</body>` tag.

We are adding the chart.js plugin for the graphs and charts. >>> See my previous example.

[Copy this code](https://bootstrappingcreative.com/bootstrap/)
